EXECUTIVE INSIGHT REPORT

Title: ApnoMart Q2 2026 - Strategic Insights
Analyst: Peddinti Kalyani
Date: 8 November 2026
Tool Used: Looker Studio

INSIGHT 1: Revenue Pattern

Q2 sales were ₹16.3M, spread almost evenly across five categories. Furniture leads at ~₹3.5M (~21%) and Electronics trails at ~₹3.0M (~18%), so no single category dominates. Sales are also uneven by weekday: Wednesday peaks at ~₹2.6M while Sunday is the weakest at ~₹1.95M, about 33% lower.

So What: Revenue is well diversified, which is low risk. The real gap is timing: Sunday sits well below the other days, which points to unused demand that a weekend promotion could capture.

INSIGHT 2: Profitability Pattern

Q2 profit was ₹4.4M at a 27.18% margin. Central (~₹0.93M, 21% of profit) and East (~₹0.92M) lead, while North is lowest at ~₹0.79M (18%), about 15% below Central. South (~₹0.83M) is also under the leaders, so the two weakest regions together contribute only ~37% of profit.

So What: Profit is healthy overall, but North and South are lagging. Since regional sales aren't on the dashboard, add them to find out whether the cause is lower volume or heavier discounting.

INSIGHT 3: Customer Behavior Pattern

Q2 had about 1.2K orders, so the average order is worth ~₹13.6K in sales and ~₹3.7K in profit. Customers are placing relatively few, high-value orders, so each order carries a lot of weight in the quarterly result.

So What: Retention and repeat purchases matter more than raw order volume. A small drop in orders would hit profit noticeably, and a small lift in repeat buying would raise it.

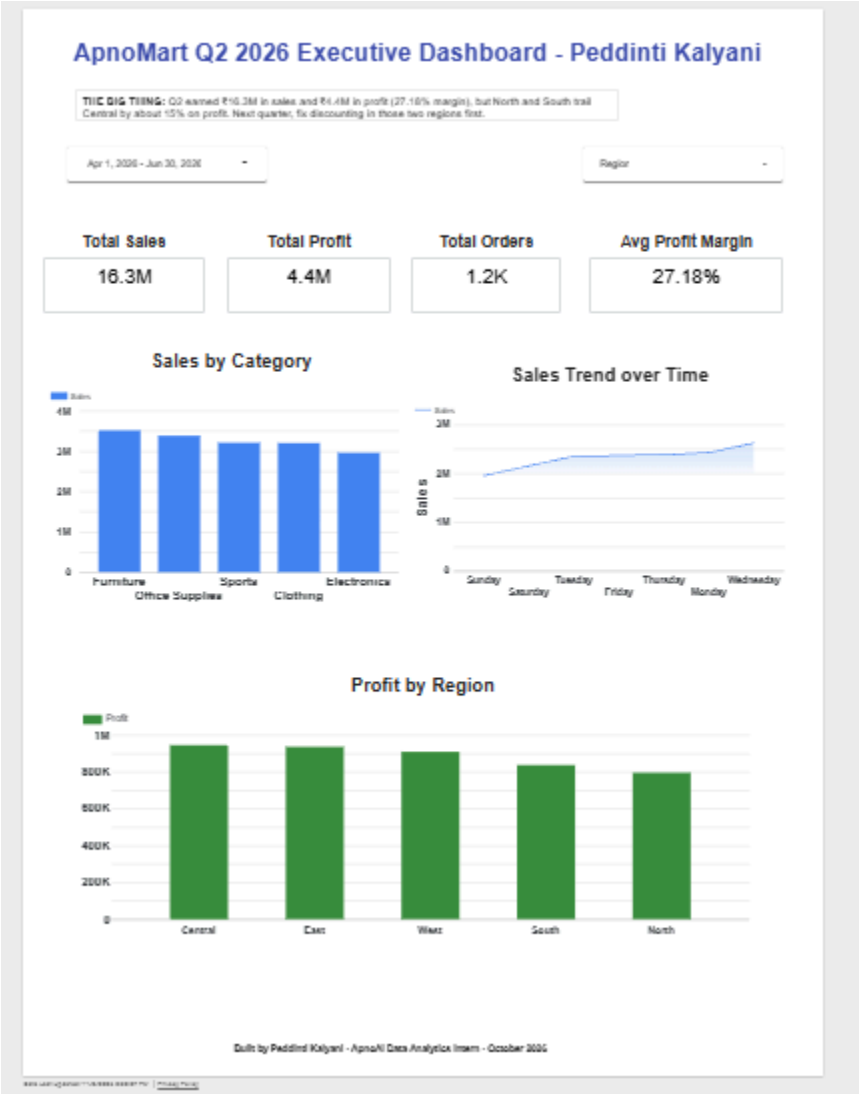

Note: Your screenshots don't show customer segment or payment method, so I couldn't state those numbers. Add a segment and payment-type chart, or give me the figures, and I'll rewrite this insight with them. Don't reuse the template's example numbers (48% Corporate, 41% UPI).

STRATEGIC RECOMMENDATION

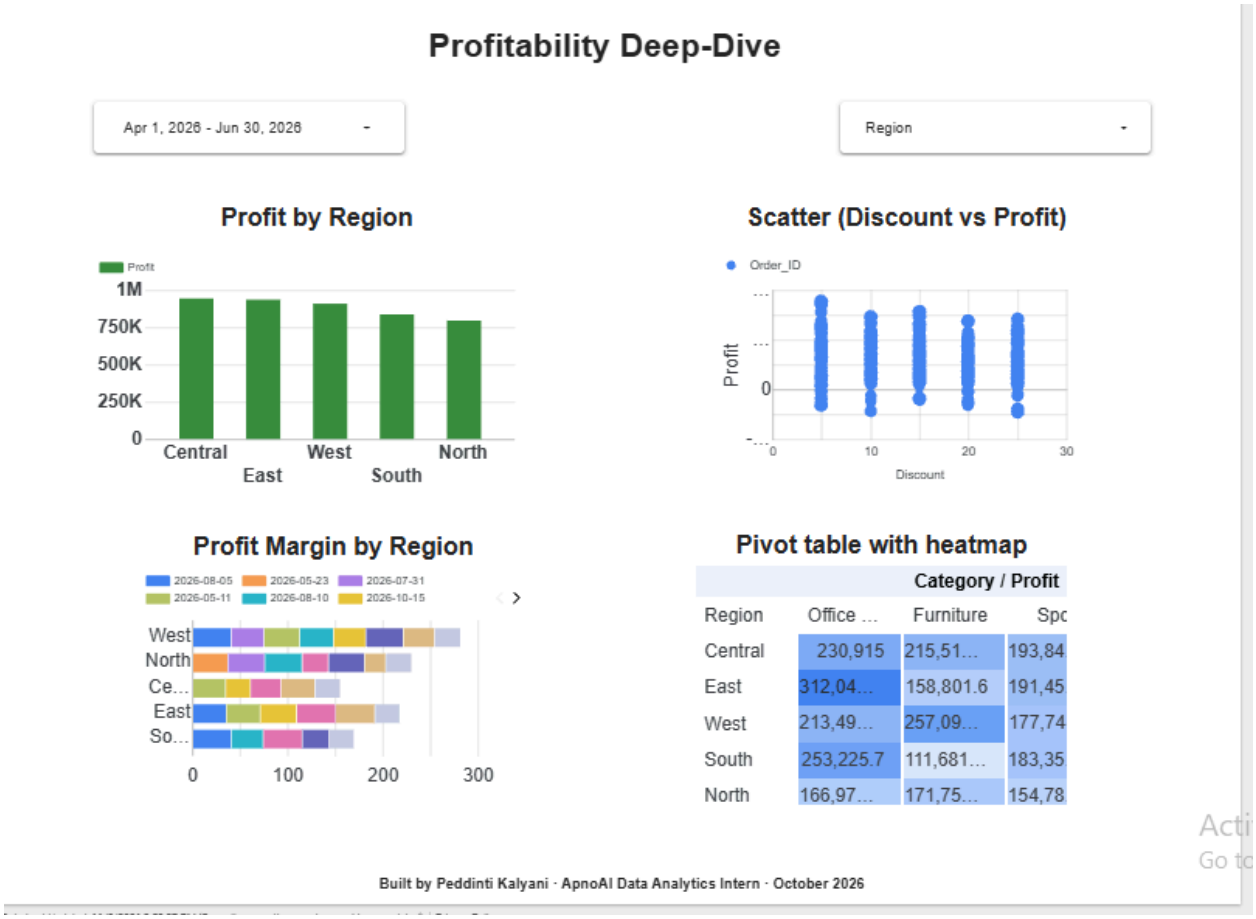

Next quarter, bring North and South up to West's profit level (~₹0.90M) by copying the pricing and discount approach used in Central and East. Review discount levels in those two regions first. Illustrative impact: about +₹0.18M profit per quarter (~4% of Q2 profit), with no new products or markets needed. Also run a Sunday promotion to lift the weakest sales day.
